Applications Flame-X 950 cables

Low Smoke Zero Halogen Fire Resistant Flame-X 950 types can be used for applications where SAFETY of human is top priority, especially where sophisticated systems are provided, example:

- Mass Transit Systems,
- High rise buildings
- Confined locations (e.g underground metro stations)
- Schools & Hospitals
- Shopping Malls
- Other places with a large concentration of people

Installation and Storage recommendation:

Flame-X 950 Fire Resistant cables are very important for human life protection. That is why they need to be stored and installed with special care and attention.
We recommend:

- Cables shall be stored indoor and special care shall be taken when temperature rises above 45 deg C
- Cables shall not be exposed to direct sunlight for considerable period of time before installation.
- Preferably the installation shall be done during morning hours when the ambient temperature is low (applicable for Middle East conditions)
- Cables shall not be installed when ambient temperature is below 0 Deg. C
- During installation it is necessary to keep right bending radius. It cannot exceed value as per technical specification, at any point.
- Wire/Rope shall not be used directly on cable sheath for pulling
- Special attention is recommended when cable is pulled on cable tray.
- Rollers and bends shall not have any sharpness that can make damage,
- Flame-X 950 cables and wires shall be installed together with special compatible LSZH, fire performance equipment (joints, boxes) at installation site.
